

## NEW PARTNER: IQ CONTAINER HOMES

IQ Container Homes Ltd is a NZ based company established in 2013. They specialise in the construction of innovative, quality, sustainable homes from new shipping containers; one of the world's most durable, weather tight, low maintenance structures.

In addition to their transportable nature and need for minimal foundations, [IQ Container Homes](http://www.iqcontainerhomes.co.nz) are constructed in NZ using environmentally responsible materials and methods, creating healthy homes with low running costs due to built-in features such as superior insulation levels, solar power generation and rainwater recycling as standard. Offsite construction minimises site disturbance. Their display home has achieved an 8 Homestar rating.

Recent builds include a 3 container 4 bed home for an Auckland client and an off-grid single container for a Northland client. The company is now expanding to offer construction in Taupo in addition to Auckland and Christchurch to better service their central and lower north island customers, with a new Taupo based show home due to open early next year.

With IQ already specialising in sustainable designs for a future proof investment, becoming a Lifemark® partner and being able to offer homes with Universal Design principles was a logical step. With small homes a key focus of the company, they already supply a number of secondary dwelling and granny flats, which can now adopt design principles to provide a more practical, comfortable dwelling for occupiers of all ages and abilities.

For more information on IQ Container Homes refer to their website: [www.iqcontainerhomes.co.nz](http://www.iqcontainerhomes.co.nz)
